

OUTLINE OF TALK

- Objectives
- Materials
- Fire Calorimetry Method
- FTIR Sampling System
- Method of Analysis
- Results: Response Times, Gas Histories, Reproducibility, Agreement with NDIR, Error Analysis
- Conclusions

OBJECTIVES

CARGO COMPARTMENT FIRE DETECTION

- Obtain concentration-time profiles of a wide variety of gases produced in early stages of cargo fire development
- Patterns of response will aid in the selection and development of improved cargo smoke and fire detectors

ULTIMATE OBJECTIVES

CARGO COMPARTMENT FIRE DETECTION

- Shorten detection times
- Improve reliability and sensitivity of detectors
- Discriminate between real and spurious signal

FIRE GAS TOXICITY MONITORING

- Develop a method for toxicity monitoring
- Determine at a glance if major interferences are present for each gas

APPROACH

FTIR ANALYSIS OF SMOKE GENERATION SOURCE

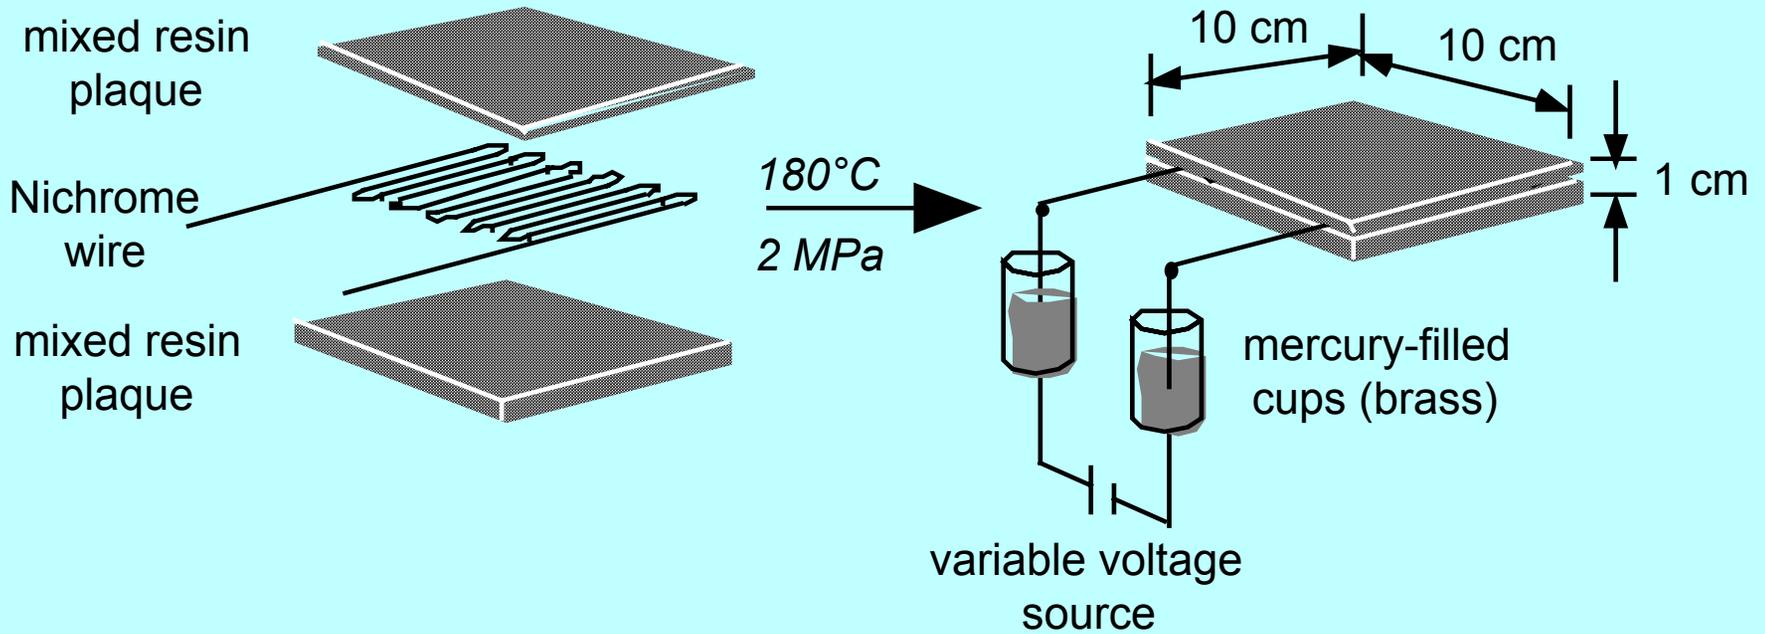

- Select a smoke generation source is representative of the composition of combustible materials in luggage
- Determine system response time
- Develop a 16 gas CLS method with low residuals
- Determine reproducibility of the fire signature for flaming and nonflaming combustion
- Check agreement of FTIR method with NDIR analysers

COMPOSITION OF MIXED RESIN SPECIMEN

Component Material	Trade Name	Parts by Weight
polyamide (nylon 66)	DuPont Zytal 101	1
polyethylene (HDPE)	Dow 08454	1
polystyrene (PS)	HiVal 5308	1
polyvinylchloride, rigid (PVC)	Geon 8700	2
thermoplastic polyurethane (TPU)	Dow 101	1
polybutyleneterephthalate (PBT)	DuPont Crastin 600	1

SMOLDERING SPECIMEN FABRICATION

FTIR SAMPLING SYSTEM ALONGSIDE THE CONE CALORIMETER

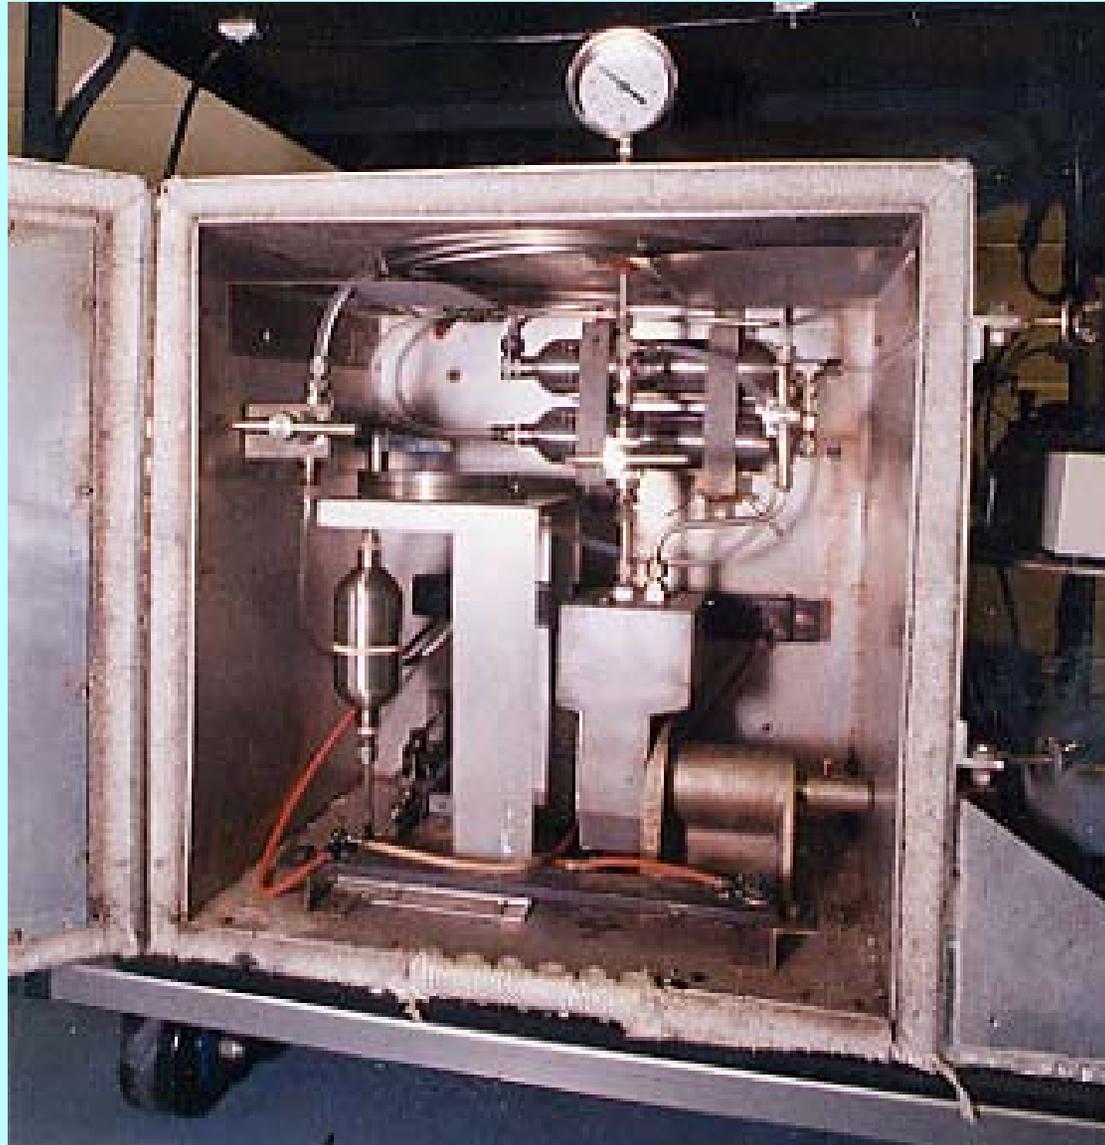

FTIR SAMPLING SYSTEM

FTIR SAMPLING SYSTEM: SIDE VIEW

FTIR SAMPLING SYSTEM: OVEN

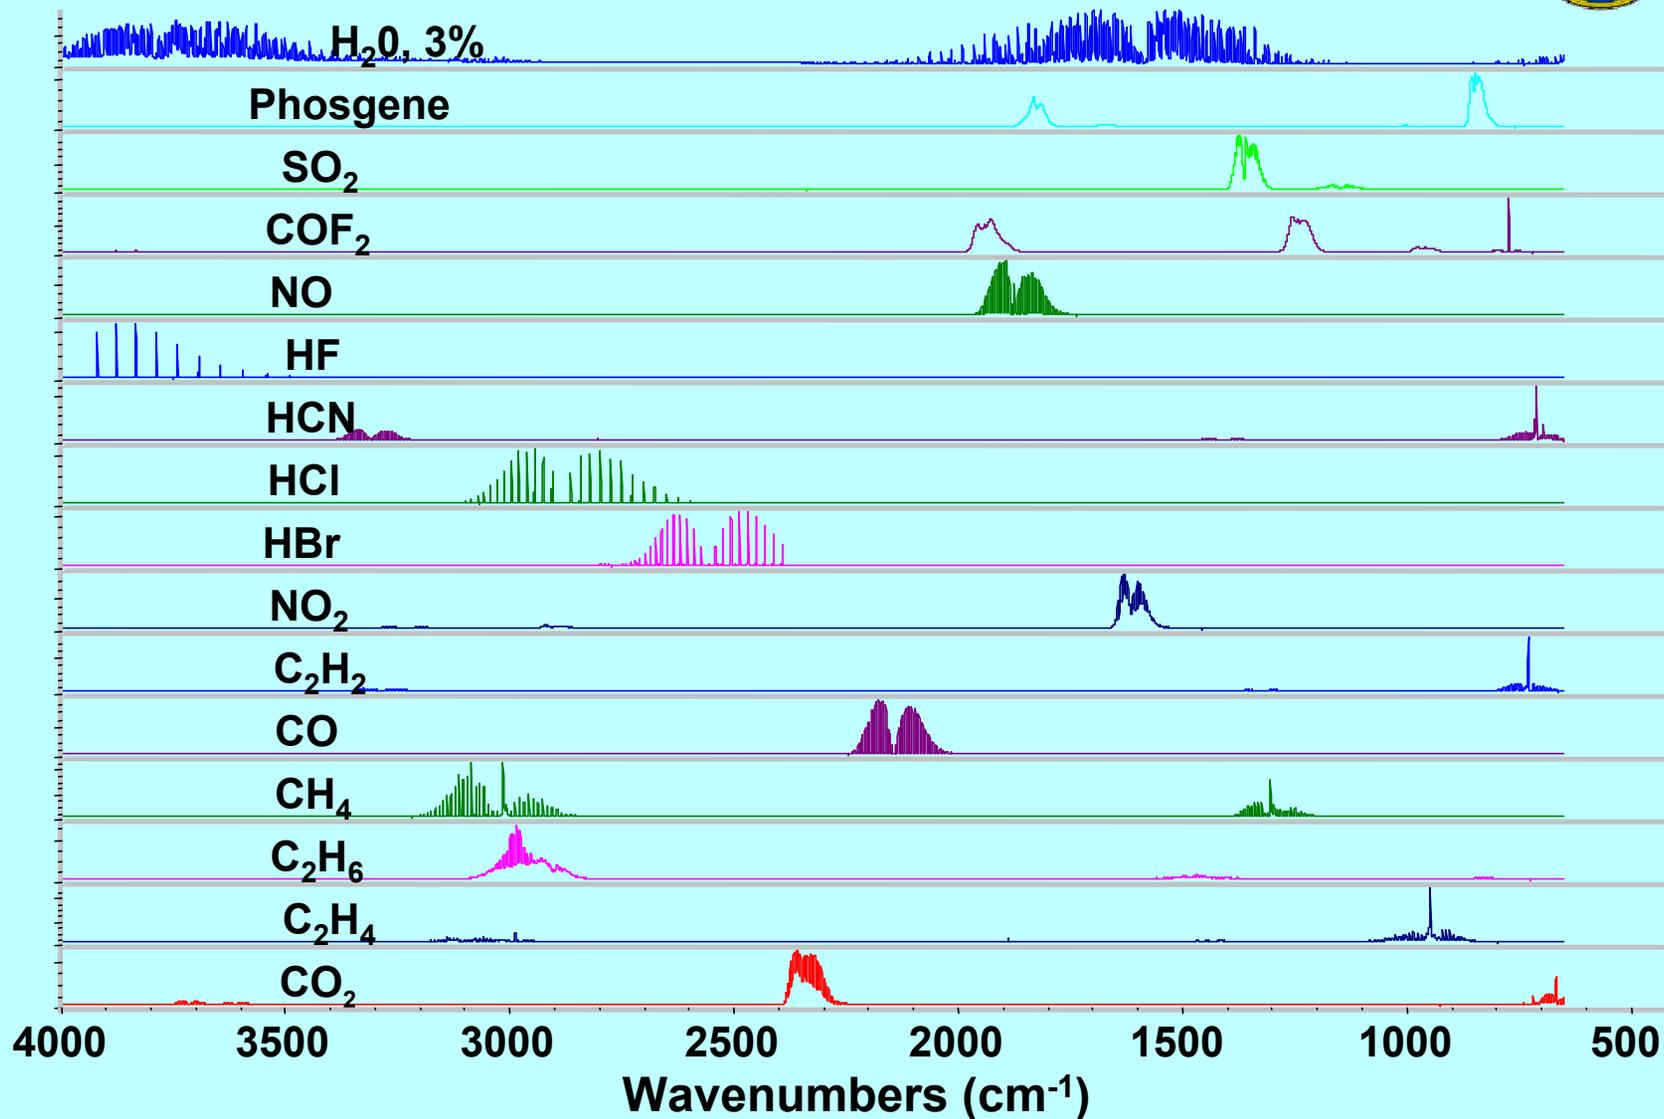

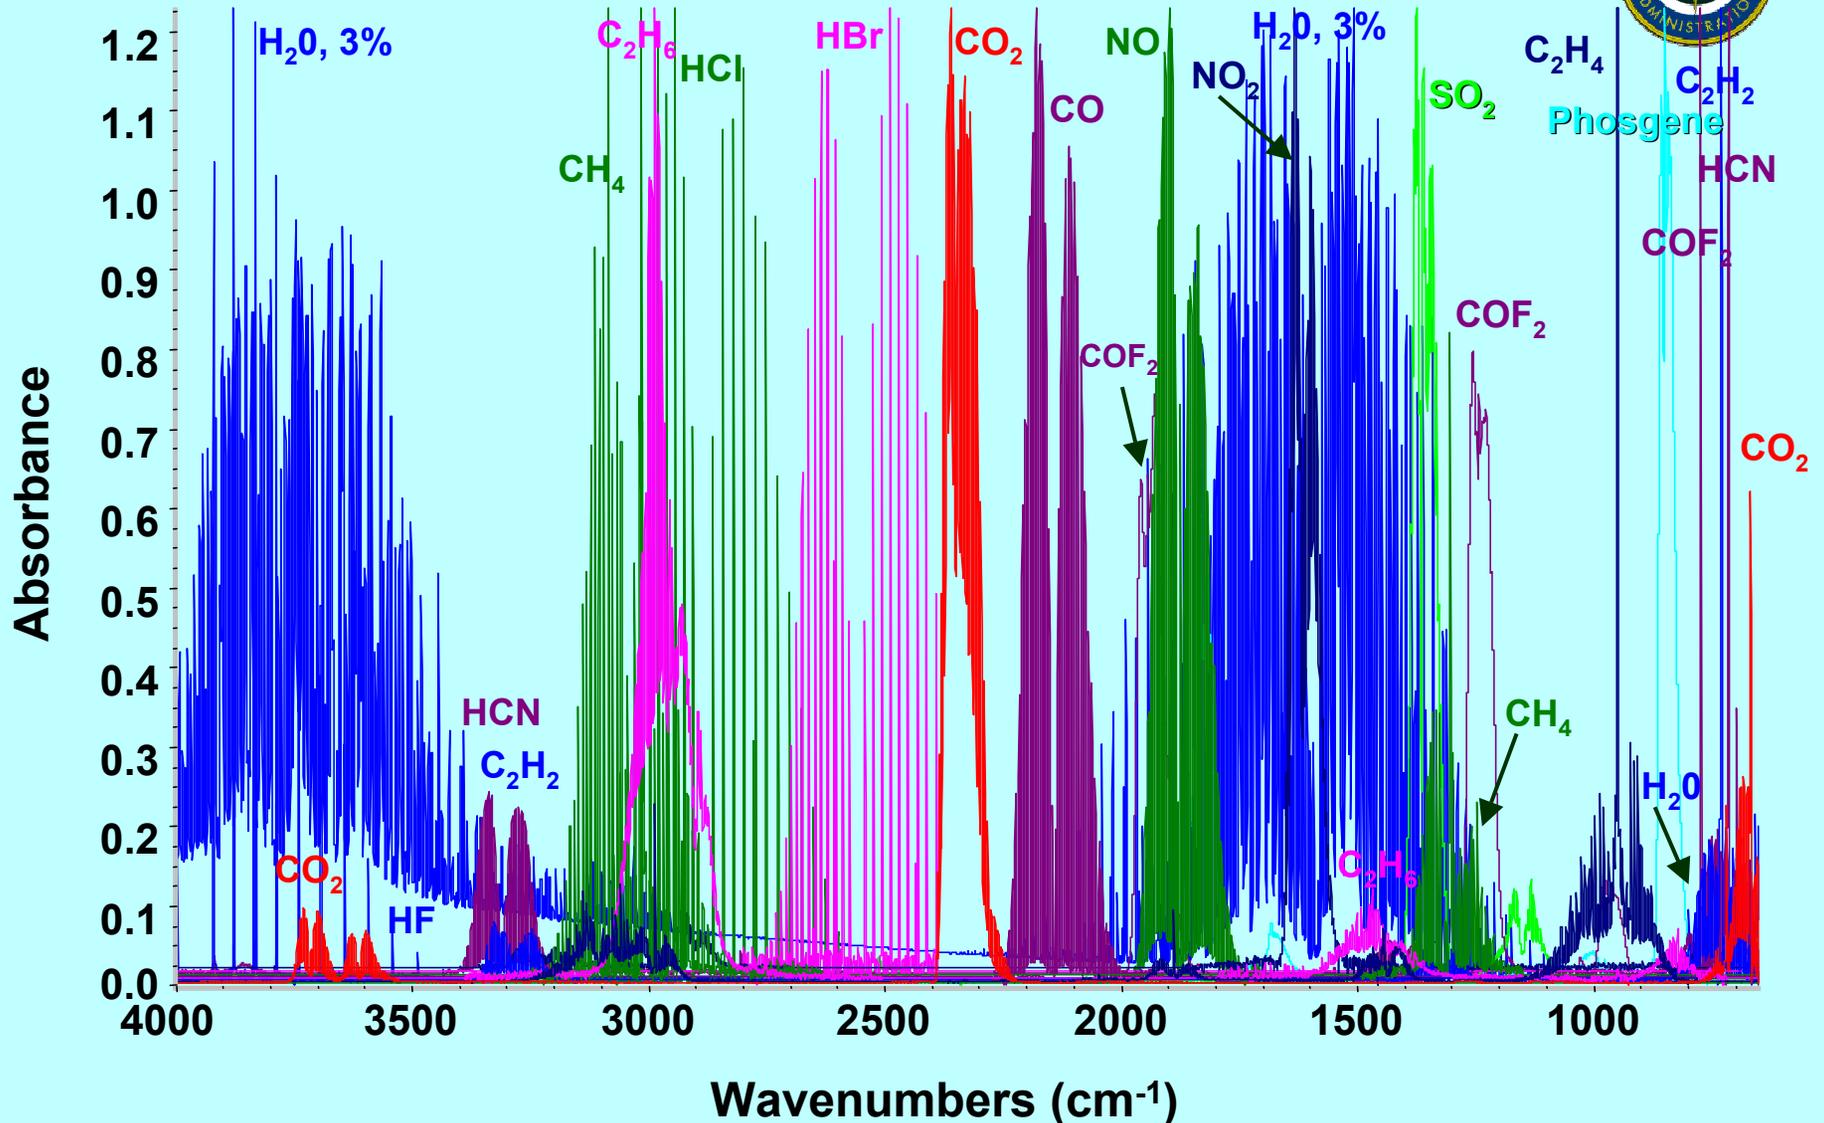

FTIR METHOD

- MCT detector, 4 meter pathlength, 0.5 cm^{-1} resolution
- CLS software selected which allows for the change of the normalized spectral shape with concentration for each of the calibration gases
- Spectral bands selected for each gas that give low residuals for the concentration ranges of the 16 gases to be analysed and the combustion gas samples
- Residuals for each fire test can then be used to determine the validity of the method for each gas

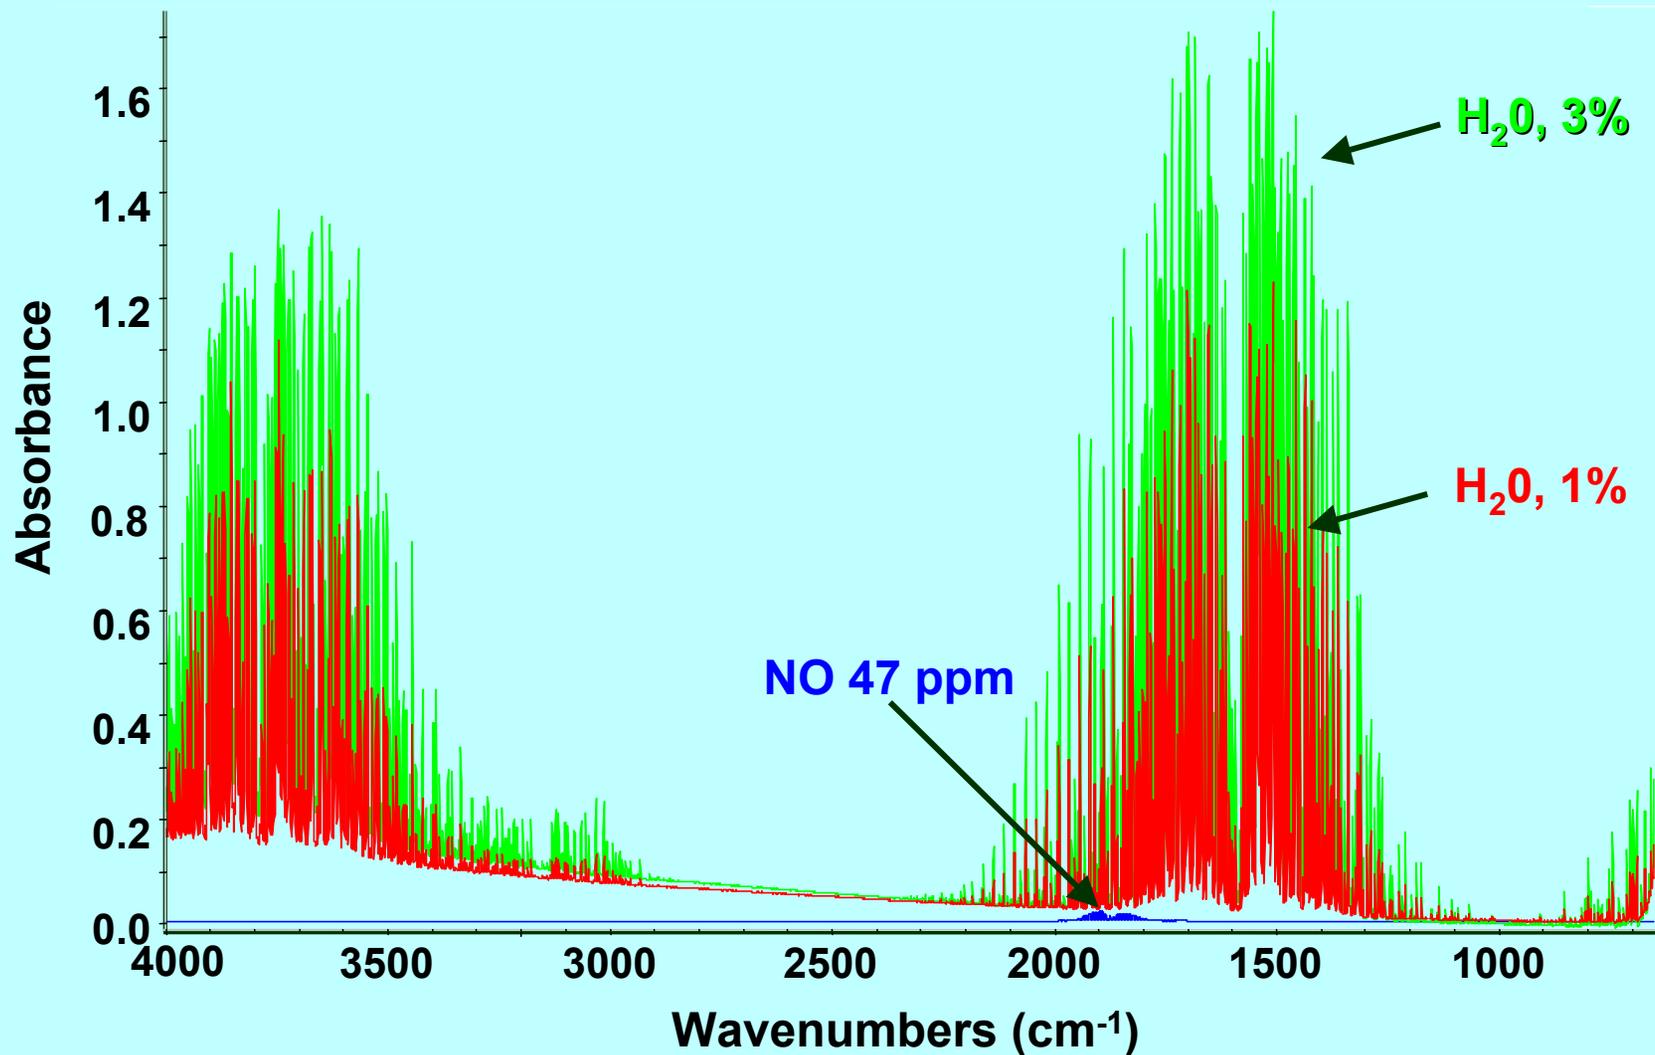

FTIR CALIBRATION SPECTRA OF SIXTEEN GASES AT 170 DEGREES C: FULL-SCALE

COMPARISON OF FTIR AND NDIR NONFLAMING PROFILES

COMPARISON OF FTIR AND NDIR FLAMING PROFILES

RESIDUALS FOR NONFLAMING SPECIMEN AT 171 SECONDS

Gas	Concentration (ppm)	+/- Error (ppm)	Error (%)
CO	53.6	0.7	1.3
CO ₂	210.5	39.2	18.6
COCl ₂	-0.1	0.1	
COF ₂	8.3	2.2	26.5*
HBr	-0.2	1.2	
HCl	805.3	14.4	1.8
HCN	5.6	0.9	16.1
HF	0.0	1.3	
NO	-0.3	-6.5	
NO ₂	-0.0	-6.5	
SO ₂	6.4	3.3	51.6*
CH ₄	37.6	0.4	1.1
C ₂ H ₂	-1.0	0.2	
C ₂ H ₄	42.9	0.4	0.9
C ₂ H ₆	0.0	2.7	
Water	267.2	572.7	214.0*

RESIDUALS FOR FLAMING SPECIMEN AT 171 SECONDS

Gas	Concentration (ppm)	+/- Error (ppm)	Error (%)
CO	1025.9	5.5	0.5
CO ₂	12182.3	1031.8	8.5
COCl ₂	0.1	0.1	
COF ₂	-0.4	1.3	
HBr	0.0	1.0	
HCl	1236.9	24.6	2.0
HCN	43.8	1.3	3.0
HF	0	1.7	
NO	90.9	11.2	12.4
NO ₂	-0.1	11.2	
SO ₂	2.5	4.8	192.0*
CH ₄	40.6	32.7	80.5*
C ₂ H ₂	50.1	0.5	1.0
C ₂ H ₄	41.6	0.5	1.2
C ₂ H ₆	-1.0	4.6	
Water	13578.6	203.6	1.5

RESULTS

- Quick system response
- Excellent agreement for replicate tests in both flaming and nonflaming mode
- Low residuals in flaming and nonflaming mode for 16 gases
- Accuracy confirmed by reasonable agreement of the FTIR method and NDIR CO and CO₂ gas analysers

CONCLUSIONS

- The patterns of response will aid in the selection and development of improved cargo smoke and fire detectors
- This FTIR method may be useful for toxic gas monitoring for fire toxicity tests.
